The Talamex Highline Xlight boats are designed for easy transport and compact storage. Despite the low weight, the boats are - thanks to the large diameter tube of 42cm in combination with a high pressure floor with inflatable keel - very stable and they have excellent sailing characteristics. All models are equipped with a pressure relief valve, solid endcones and advanced telescopic paddles.

In the standard package of the Talamex Aqualine inflatable boats you will find: repair kit, sliding seat, paddles, stainless steel towing eyes, mooring line, stowbag, fender on the boats for extra protection and a hand pump.

On all boats is a 2 year warranty and all Talamex boats are - if necessary - CE certified by the Dutch Marine Inspection making them meet all European requirements!

Splash Marine Supplies stocks the Talamex range of Inflatable Boats and RIBS. Given the European design and quality, the Talamex range of boats are the best value on the market today!

Packages available with Mercury and Mariner outboard engines.
